Copernicus Climate Change Service - 311a Lot 2 Defining a Common Data Model

David I. Berry National Oceanography Centre, UK 28th June 2017

Summary

This document describes background information and a summary of initial steps taken towards defining a common data model for the representation of in situ observations as part of the C3S 311a activity.

An overview of the preferred data model from Lot 2 is given and participants on the call are invited to:

- Review the background information and proposed data model presented in this document
- Endorse the proposed data model or propose an alternative model for use within C3S 311a.

1 Introduction

The Copernicus Climate Change Service (C3S), through its "Collection and Processing of In Situ Observations (C3S 311a)" tender, seeks to harmonise both data formats and metadata (discovery and observational) conventions. The first step of this process, as noted within the invitation to tender, is the development or adoption of a common data model for the data and metadata. Within this document, when complete, we will describe the common data model developed within Lot(s) 1 - 4 of the C3S 311a tender in consultation with ECMWF. The themes for the Lots 1 - 4 are:

- Lot 1 Coordination of data rescue activities
- Lot 2 Access to observations from global climate data archives
- Lot 3 Access to observations from baseline and reference networks
- Lot 4 Climate monitoring products for Europe based on in situ observations.

Lot 1 (C3S DRS) are building a new data portal, led by the WMO I-DARE portal lead from KNMI, that will be melded together with a much enhanced EU FP 7 ERA-CLIM 2 data registry, led by that project's Portuguese lead, plus new and enhanced data tools and techniques led by the University of Bern group. Data rescue accounts for only 10 - 15% of the Lot 1 budget, and is focused on three regions in the Southern Hemisphere in and around Argentina, South Africa and in the New Zealand to Drake Passage sector, but will link closely to the larger data rescue efforts of ACRE, IEDRO, ICA&D and similar. As with Lot 2, Lot 1 will deal with the full range of historical terrestrial and marine surface weather observations plus upper air data, serving the various international repositories these data are held in, plus having the capacity to deal with their metadata (including a compendium of all data forms/templates these data are recorded on), scanned images of hard copy data, and weather and analogue (pluviograms, thermograms, barograms etc) charts etc.

Within Lot 2, observations and metadata from land stations and marine platforms will be harmonised into a common data model and a web based service developed to serve the data through the C3S Climate Data Store (CDS). The observations include instantaneous / point observations, such as those from SYNOP weather reports, as well as daily and monthly summaries (CLIMAT DAILY and CLIMAT). A single report may contain observations of multiple parameters, e.g. air temperature, humidity, wind speed etc. The stations range from stationary land stations to mobile merchant ships, drifting buoys and other marine platforms.

Lot 3 are creating a harmonized observational dataset of measurements from the Global Baseline and Reference radiosounding networks. Within the first year observations are restricted to temperature and humidity measurements, in future years this will be expanded to include other essential climate variables (surface temperature, wind, ozone, trace gases, GPS IWV). Observations from the GRUAN and GUAN networks will be the main focus, but with potential extension to the broader RAOB program. Annual updates will be provided. Integrated physical and statistical corrections will be used to improve the quality of the baseline observations using the data from the reference networks. Lot 3 intend to be fully compliant with ODB version 2 (ODB2), noting that some changes will be necessary to ODB2 to report the full range of information required. Discovery metadata are planned to be compliant with ISO 19115 and observational metadata reported using the CF conventions. Compliance with the WIGOS metadata standard is also expected.

Lot 4 will build on and extend the European Climate Assessment and Dataset (ECA&D) project and E-OBS daily dataset for Europe. The gridded E-OBS dataset was initially developed

¹From the ITT: A common data model is different from a file format, which defines how information is encoded in a file. The purpose of a data model is to provide a well-defined data structure that can be used to represent data records from a variety of sources, in such a way that the information contained in those records can be unambiguously accessed using a common set of tools. Development of a common data model for observations involves specification of data attributes and their symbolic names, including, for example, identifiers for different instruments, observed parameters, geolocation and timing, etc. A governance structure is required to manage such specifications, ensure consistency with standards where they exist, and to ensure a controlled evolution of the data model.

as part of the ENSEMBLES project for statistical comparisons with Regional Climate Model output (Haylock et al., 2008). More recently European research projects EURO4M, UERRA, EUPORIAS, EUSTACE, and CLIPc led to further improvements and applications, and ECA&D/EOBS has now become reference datasets for a larger user community, also outside climate research. Funding by EUMETNET and KNMI supported the developments of additional functionality, and the close collaboration with EUMETNET members has led to strongly improved ECA&D station coverage over Europe in recent years. Within C3S_311a lot 4, the ECA&D and E-OBS will be transformed into an operational system for the Copernicus Climate Change Service (C3S), delivering regularly updated gridded products based on European in-situ data for many Essential Climate Variables (ECVs). The underlying station data that include surface air temperature, precipitation, humidity, wind speed and direction, will be made available as well, pending permission by the owners of these data. To serve climate change monitoring and climate impact assessments a large number of user-oriented climate indices will be provided, both as time series at station sites and as gridded products. No preference has been specified for the data models to be used.

Section 2 of this report provides background information on joint activities between Lots 2 and 3 so far, the ECMWF Observations DataBase (ODB) data model and relevant WMO data models. Section 3 gives an overview of the preferred data model from Lot 2 and proposes a list of elements for the observations table. Auxiliary tables are also proposed in Section 3 but left empty for future discussion once the principles of the type of data model have been agreed across lots. Section 4 proposes a governance mechanism for the common data model across lots and next steps required.

2 Background and existing standards

2.1 ODB and tenders for Lots 2 and 3

Both Lots 2 and 3 have proposed using data models based on the data model developed by ECMWF as part of the Observations DataBase (ODB) software. Within the ODB type data model each observation of a single parameter is stored as a separate record, with a single report spanning multiple records. Within each record the station / report information is repeated. A simplified example is shown in Table 1.

Table 1: Simplified example of records in ODB type data model, with observations from reports 1 and 2 spanning multiple records. For simplicity, the z coordinate has been omitted but profile data would be represented with each layer / height as a separate record

		head	er informatio	n	observation	informat	ion
recor	d repor	t obs	date	location	parameter	value	units
id	id	id					
1	1	1	2012-01-01 12:00+0.0	POINT(-40 40)	air temperature	300.0	K
2	1	2	2012-01-01 12:00+0.0	POINT(-40 40)	sea level pressure	1013.0	hPa
3	2	3	2012-01-01 18:00+0.0	POINT(-40.1 40.2)	air temperature	300.3	K
4	2	4	2012-01-01 18:00+0.0	POINT(-40.1 40.2)	sea level pressure	1013.2	hPa

End of table

The implementation of the ODB model at ECMWF, that proposed in Lots 2 and 3 all have differing requirements. For example, the existing observations table columns defined within ODB² contain many parameters that are of little relevance to the In Situ observations but are relevant to the assimilation of data from many different sources into the numerical models. Conversely,

²http://apps.ecmwf.int/odbgov/column/

there are many parameters included in the data from Lots 2 and 3 that are required to correctly interpret the observations but that are not included in ODB.

In order to facilitate the development of the data model there have been two initial teleconferences between Lots 2 and 3 discussing the CDM and collating information on the parameters required . Each parameter and report type has its own unique set of fields and metadata fields. For example, surface air temperature observations are typically made in a screen or shelter that can influence the quality of the measurements. As a result, it is desirable to include information on the screen type, material and dimensions alongside the observation. For upper air temperature observations this metadata information is not relevant but other parameters will be required, such as the type of balloons used, instrument type and burstpoint.

In order to represent the wide variety of metadata required across (and within) Lots three different solutions are possible:

- The observations table is expanded to include all possible metadata fields, with new columns added when a new data / report type is included.
- Each report (and possibly parameter) type has a separate observations table, with a minimum set of common parameters defined across the different tables.
- The observations table is defined to include the minimum set of information required for each observation and the metadata is then linked via a series of Entity-Attribute-Value (EAV) based tables (e.g. see Table 2).

Within this document we are proposing to use solution (3), defining a minimum set of parameters to be included in the observations table and linking to the metadata in auxiliary tables. Solution (1) has been discounted as being impractical from an implementation perspective and from the perspective of adding new data types at a future date. Option (2) has not been discounted but will result in a series of data models being defined rather than a single unified data model.

Table 2: Simplified example for EAV type table for profile (atmospheric and oceanic) data.

report id	report type	field	value coded	value numeric
4	GRUAN	Ascent Balloon Number	1	NA
4	GRUAN	Ascent Balloon Type	1	NA
4	GRUAN	Ascent balloon weight (g)	NA	100.0
				Food of tololo

End of table

2.2 BUFR and WIGOS Metadata Standard

Prior to defining the data model it is useful to refer to both the WMO Binary Universal Form for the Representation of meteorological data (BUFR) (WMO, 2015a) and the WMO Integrated Observing System Metadata Standard (WMDS) (WMO, 2015b).

The BUFR format is a flexible and efficient table driven format for reporting weather observations on the WMO Global Telecommunications System (GTS) in binary. The tables defined as part of the BUFR format include many of the parameters that will be included in the CDM. For example, Common code table C6 (WMO 2015a) includes all the measurement units reportable in BUFR (and other WMO codes). Similarly, code tables are defined for reporting instrument types and methods, station types etc. Where possible, these code tables should be referenced and used in preference to defining new code tables.

In recognition of the increasing importance of observational metadata the WMDS is currently under development and undergoing a phased implementation (WMO, 2015b). The WMDS

forms an extension of the ISO19115 metadata standard, with additional mandatory elements describing both the station level and discovery metadata as well as specific information on the instrumentation used and processing steps. As part of the process simplified versions of BUFR and other tables have been included in the standard. As with BUFR these tables should be referenced, where appropriate, in preference to defining new code tables. Additionally, for compatibility with WIGOS the CDM should contain all mandatory elements of the WMDS.

3 Common Data Model

As noted above, we are proposing a data model based on the ODB type data model, but with the metadata linked through a series of auxiliary / configuration tables. A schematic of this is shown in Figure 1. The observations table is described fully below (Table 3) and contains the geospatial (xyz) and temporal (t) locations of both the station making the report and the observed parameter, unique identifying information for the station, source data (i.e. dataset) information, observed values and data licencing / usage rights. In Table 3 below, where we list the proposed elements for the observations table, we also identify where there is overlap with the elements required by the WMDS. It should be noted that not all elements from the WMDS will appear in the observations table but will be included in the auxiliary tables.

To enable flexibility and accommodate the diverse data types and metadata the additional tables are proposed to be EAV based (see Table 2 above for example). This also gives the flexibility of adding a new field by simply adding a new row rather than column. These additional tables have been deliberately omitted from this document whilst the general principles and structure of the CDM are agreed.

3.1 Observations table

102	exposure_of_sensor	int (fk)	instrument_exposure_quality5 (c)	qua 6 it y 5 (c)	Whether the exposure of the instrument will
					impact on the quality of the measurement
103	original_precision	int		NA	Original reporting precision in units
					given by 'OriginalUnits'
104	original_units	int (fk)	nnits	NA	Original units
105	original_value	numeric		NA	Original value as reported or
					recorded in log book.
106	conversion_factor	int (fk)	conversion_factor	7-01 (o)	Link to table describing conversion process
107	processing_code	int (fk)	processing_code	7-01 (0)	e.g. TRC (temperature radiation cor-
					rections) etc. Encoded in table.
108	processing_level	int (fk)	processing_level	(0) 90-2	Level of processing applied to observation.
109	adjustment₋id	int (fk)	adjustment		Adjustment applied to observation reported in observation value (observa-
					tion_value = original + adjustment)
110	traceability	int (fk)	traceability	8-05 (c)	Whether observation can be traced to international standards.
					End of table

3.2 Station configuration table

Entity-attribute value based table for station configuration (and others).

Table 4: station_configuration

element number	element_name	type	external_table	Description
0	station_primary_id	varchar		Primary (WMO) ID for station
-	station_primary_id_scheme	int (fk)	id_scheme	Scheme used for primary ID
2	station_secondary_id	varchar		Secondary (local) ID for station
က	station_secondary_id_scheme	scheme int (fk)	id_scheme	Scheme used for secondary ID
4	station_name	varchar		Name of station (e.g. Tateno)
2	station_abbreviation	varchar		Abbreviation of station name (e.g. TAT)
9	start_date			Date that the station first started reporting
7	end_date			Last data the station reported
œ	station_type	int (fk)	station_type	Type of reporting station
6	platform_type	int (fk)	platform_type	Generic type of observing platform
10	platform_sub_type	int (fk)	platform_sub_type	Specific type of observing platform
7	operating_institute	int (fk)	institute	Institute operating the station
12	operating_territory	int (fk)	sub_region	Sub-region where station is located or
				country of registry for mobile station
13	observing_frequency		observing_frequency	Typical frequency of observations for this station
14	telecommunication_method	int (fk)	communication_method	Method used to report observations
15	station_automation	int (fk)	automation_status	Whether station is automated, manual or mixed
16	measuring_system_model	int (fk)	measuring_system_model	Station / AWS model type
17	measuring_system_id	varchar		ID or serial number of measuring system
18	metadata_source	int (fk)	metadata_source	Source of metadata for this station
19	metadata_version	varchar		Version of metadata source
20	metadata_id	varchar		Record number in metadata source
				(or other unique ID)
21	metadata_report_date			Date metadata record was prepared
22	number_of_fields	numeric		Number of additional fields
23	field	int[]	station_configuration_fields	Field to which following values correspond
24	value	numeric[]		Values for specified fields
25	comment	varchar		Any other comments / footnotes
				End of table

3.3 Source configuration table	3.3	Source	configuration	table
--------------------------------	-----	--------	---------------	-------

Table 5: source_configuration

element number	element name	tvpe	external table	wigos	Description
3		296.	2000	226	
0	source_id	int			Unique record ID for dataset
•	product_id	varchar			ID for product
2	product_name	varchar			Name of source, e.g. International Com-
					prehensive Ocean Atmosphere Data
					Set, RS92 GRUAN Data Product
က	product_code	varchar			Abbreviations / product code, e.g. ICOADS, RS92-GDP
4	product_version	varchar			Version number for dataset, e.g. Release 3.0.0
2	product_level	int (fk)	product_level		Level of product
9	description	varchar			Description of dataset / comments
7	product_references	varchar[]			References describing the dataset
8	product_citation	varchar			Citation to use when using this product
6	product_status	int (fk)	product_status		Status of product, draft, pre-release, release
10	source_format	int [枨]	source_format	7-07 (m)	Original format for data
11	source_format_version	varchar		7-08 (m)	Version of original data format
12	source_file	varchar			Filename for data from source
13	source_file_checksum	varchar			Checksum of source datafile
14	data_centre	int [枨]	institute	9-01 (m)	Data centre from which data sourced
15	data_centre_url	varchar		9-01 (m)	URL for data centre
16	data_policy_licence	int [枨]	data_policy_licence	9-02 (m)	Data policy / licence
17	pi_name	varchar		10-01 (m)	Name of PI responsible for dataset
18	pi_email	varchar		10-01 (m)	Email address of PI
19	pi_url	varchar		10-01 (m)	URL for PI
20	number_of_fields	numeric			Number of additional fields
21	field	int[]	source_configuration_fields	elds	Fields to which following values apply
22	value	numeric[]			additional values
23	history	varchar			History of source
24	comments	varchar			Additional comments / footnotes
25	timestamp				Date record created

3.4	Profile	configuration	table
-----	----------------	---------------	-------

Table 6: profile_configuration

element_number	element_name	kind	external_table	Description
0	profile_id	varchar	AN	NA
•	report_id	varchar	NA	NA
2	standard_time	int (fk)		e.g. Standard / scheduled time for launch
				or report, e.g. 00, 06, 12, 18 UTC
က	actual_time			Actual report / launch time
4	processing_codes int (fk)	int (fk)	processing_code	NA
2	profile_number	numeric		e.g. Balloon Number
9	number_of_fields	numeric		Number of fields in array
7	field	int[]	profile_configuration_fields	Fields to which the following values apply
æ	value	numeric[]	NA [Values for the additional fields
6	comment	varchar		Any other comments

3.5 Ser	ısor confi	guration	table
---------	------------	----------	-------

Table 7: sensor_configuration

element_number	element_name	type	external_table	Description
0	instrument₋id	varchar		Unique ID for this instrument in com-
				bination with entry_number
•	entry_number	numeric	NA	Entry number for this record / instrument
2	station_id	varchar	station_configuration	Station associated with this instrument
က	field	int (fk)	sensor_configuration_fields	sensor_configuration_fields fields for which this entry is applicable
4	type	int (fk)	data_type	type of metadata entry, 0 = numeric, 1 = coded etc
က	value_numeric	numeric	NA	Numeric value for this entry (if numeric)
4	value_coded	int (fk)	sensor_configuration_fields coded value for this entry	coded value for this entry
വ	value_character	varchar	NA	Value for entry if not coded or numeric
9	value_timestamp timestamp	timestamp	NA	time stamp entry
7	date_start	timestamp NA	NA	start date for period of validity as-
				soiciated with this entry
8	date_end	timestamp NA	NA	end date for period of validity as-
				soiciated with this entry
				End of table

7 88	wind	atmospheric	surface; upper-air upper-air	5 >	northward_wind_spence1	is positive when directed eastward (negative westward). Wind is defined as a two-dimensional (horizontal) air velocity vector, with no vertical component. (Vertical motion in the atmosphere has the standard name upward_air_velocity.) Northward indicates a vector component which is positive when directed northward (negative southward). Wind is defined as a two-dimensional (horizontal) air velocity vector, with no vertical component. (Vertical motion in the atmosphere has the
						standard name upward_ar_velocity.) Continued on next page

Table 29 observed_variable (cont.)

				200	ומטוס בס ספס וייין	
Value	Value Parameter	Domain	Sub domain	Abbreviation	Name Units	Description
	group					
58	wind	atmospheric	surface; upper-air	>	wind_speed m s-1	Speed is the magnitude of velocity. Wind is defined as a two-dimensional (horizontal) air velocity vector, with no vertical component. (Vertical motion in the atmosphere has the standard name upward_air_velocity.) The wind speed is the magnitude of the wind velocity.
30	wind	atmospheric surface	surface	w-gust	wind_speed_of_gustn s-1	Speed is the magnitude of velocity. Wind is defined as a two-dimensional (horizontal) air velocity vector, with no vertical component. (Vertical motion in the atmosphere has the standard name upward_air_velocity.) The wind speed is the magnitude of the wind velocity. A gust is a sudden brief period of high wind speed. In an observed timeseries of wind speed, the gust wind speed can be indicated by a cell_methods of maximum for the time-interval. In an atmospheric model which has a parametrised calculation of gustiness, the gust wind speed may be separately diagnosed from the wind speed.

Table 31: observation_value_significance

Value	Description
0	Maximum value over indicated period
1	Minimum value over indicated period
2	Mean value over indicated period
3	Median value over indicated period
4	Modal value over indicated period
5	Mean absolute error over indicated period
6	Best estimate of standard deviation (N-1) of
	observed parameter over indicated period
7	Standard deviation (N) of observed pa-
	rameter over indicated period
8	Harmonic mean of observed param-
	eter over indicated period
9	Root mean square vector error of observed
	parameter over indicated period
10	root mean square of observed param-
	eter over indicated period
11	Vector mean of observed parame-
	ter over indicated period
12	Instantaneous value of observed parameter
13	Observed tendancy: Increasing, then
	decreasing; Observed parameter the same
	or higher than three hours ago
14	Observed tendancy: Increasing, then steady;
	or increasing, then increasing more slowly
15	Observed tendancy: Increasing
	(steadily or unsteadily)
16	Observed tendancy: Decreasing or
	steady, then increasing; or increasing,
	then increasing more rapidly
17	Observed tendancy: Steady; Observed
	parameter the same as three hours ago
18	Observed tendancy: Decreasing, then
	increasing; Observed parameter the same
	or lower than three hours ago
19	Observed tendancy: Decreasing, then steady;
	or decreasing, then decreasing more slowly
20	Observed tendancy: Decreasing
	(steadily or unsteadily)
21	Observed tendancy: Steady or increas-
	ing, then decreasing; or decreasing,
	then decreasing more rapidly
	End of table

Table 32: spatial_representativeness

Value	Description
0	Nil reason - None of the codes in the table is
	applicable in the context of the observed quantity
	or unknown, or not available information.
1	microscale - An area or volume less than 100
	m horizontal extent (for example, evaporation)
2	toposcale, local scale - An area or volume
	of 100 m to 3 km horizontal extent (for
	example, air pollution, tornadoes)

Continued on next page

Table 32 spatial_representativeness (cont.)

	()
Value	Description
3	mesoscale - An area or volume of 3 km
	to 100 km horizontal extent (for example,
	thunderstorms, sea and mountain breezes)
4	large scale- An area or volume of 100 km
	to 3000 km horizontal extent (for example,
	fronts, various cyclones, cloud clusters)
5	planetary scale - An area or volume of
	more than 3000 km horizontal extent (for
	example, long upper tropospheric waves)
6	drainage area - An area (also known
	as catchment) having a common outlet
	for its surface runoff, in km2
	End of table

Table 33: automation_status

Value	Description
0	Automatic observation.
1	Automatic, always supplemented
	by manual input.
2	Automatic, occasionally supple-
	mented by manual input.
3	Automatic, supplemented by man-
	ual observations.
4	Manual observation.
5	Unknown.
6	Visual observation.
	End of table

End of table

Table 34: instrument_exposure_quality

Value	Description
1	Class 1 - Exposure of instrument allows
	reference level measurements
2	Class 2 - Exposure of instrument has small
	or infrequent influence on measurement
3	Class 3 - Exposure of instrument leads
	to increased uncertainty or occa-
	sional invalid measurements
4	Class 4 - Exposure of instruemnt leads to high
	uncertainty or regular invalid measurements
5	Class 5 - Exposure of instrument leads
	to invalid measurements
	End of table

Table 40: observing_frequency

Value	Code	Description
0	opd	One observation per day (24 hour intervals).
1	tpd	Two observations per day (12 hour intervals).
2	fpd	Four observations per day (6 hour intervals).
3	epd	Eight observations per day (3 hour intervals).
4	hly	Hourly observations.
5	irr	Irregular observations.

Table 41: communication_method

Value	Description
0	Cellular (unspecified)
1	Meteosat DCP
2	Iridium (unspecified)
3	GOES DCP
4	VSAT (unspecified)
5	Landline telephone
6	Radio modem
7	E-mail (unspecified)
8	Voice (ship). The observation is sent to a NMS through the telephone network. The communication may use Inmarsat, Iridium, Vsat, VHF
9	Email (ship). The observation is sent to a NMS through an email. The WMO message is attached to this email. The satellite communication provider may be Inmarsat, Iridium, Vsat
10	Web (ship). The observation is sent through the Web (example: TurboWeb). The satellite communication provider may be Inmarsat, Iridium, Vsat
11	Inmarsat-C (FM13, SAC41). Standard procedure used to report observations (FM13 messages) from conventional VOS for many years. Collect call system: the NMS which receives the observations pays the communication costs
12	Inmarsat-C (FM13, other SAC). FM13 messages are sent to a dedicated SAC (other than SAC41) established at one, or more LES. In general, communications are paid by the country who recruited the ship
13	Inmarsat-C (EUHC). Text messages containing compressed data (E-SURFMAR format) are sent ashore through Inmarsat-C to a dedicated SAC and LES. Communications are paid by the country who recruited the ship
14	Inmarsat-C (SEAS). SEAS binary messages sent through Inmarsat-C Data Mode to a dedicated SAC and LES. Communications are paid by NOAA/NWS
15	Automated Identification System (direct or through satellite)
16	Argos system
17	Cellular (Dial-up). Dial-up communication using terrestrial wireless networks (GSM, GPRS)
	Continued on next page

Table 41 communication_method (cont.)

	145.5 11 55
Value	Description
18	Cellular (SMS). SMS sent through terrestrial
	wireless networks (GSM, GPRS)
19	Globalstar communication system
20	GMS (DCP). Data Collecting Platform of
	Geostationary Meteorological Satellites
21	Iridium (SBD). Short Burst Data service
	of Iridium communication system
22	Iridium (Email). Email sent through
	Iridium (e.g. Easymail)
23	Iridium (Dial-up). Dial-up commu-
	nication using Iridium
24	Inmarsat-C (Data Mode). Data Mode service of
	Inmarsat-C used by S-AWS. See above for SEAS
	which also uses this service for conventional VOS
25	Inmarsat-C (Email). Email sent
	through Inmarsat-C
26	Orbcomm communication system
27	Vsat (Email). Email sent through Vsat
28	Vsat (Dial-up). Dial-up communication using Vsat
29	Delayed Mode only
30	Other (specify in footnote).
