Copernicus Climate Change Service - 311a Lot 2
Defining a Common Data Model

David I. Berry
National Oceanography Centre, UK

July 4, 2017

Summary

This document describes background information and a summary of initial steps taken towards defining a common data model for the representation of in situ observations as part of the C3S 311a activity.

An overview of the preferred data model from Lot 2 is given and participants on the call are invited to:

- Review the background information and proposed data model presented in this document

- Endorse the proposed data model or propose an alternative model for use within C3S 311a.

Contents

List of Tables

1 Introduction

The Copernicus Climate Change Service (C3S), through its "Collection and Processing of In Situ Observations (C3S 311a)" tender, seeks to harmonise both data formats and metadata (discovery and observational) conventions. The first step of this process, as noted within the invitation to tender, is the development or adoption of a common data model[1] for the data and metadata. Within this document, when complete, we will describe the common data model developed within Lot(s) 1 - 4 of the C3S 311a tender in consultation with ECMWF. The themes for the Lots 1 - 4 are:

- Lot 1 - Coordination of data rescue activities

- Lot 2 - Access to observations from global climate data archives

- Lot 3 - Access to observations from baseline and reference networks

- Lot 4 - Climate monitoring products for Europe based on in situ observations.

Lot 1 (C3S DRS) are building a new data portal, led by the WMO I-DARE portal lead from KNMI, that will be melded together with a much enhanced EU FP 7 ERA-CLIM 2 data registry, led by that project's Portuguese lead, plus new and enhanced data tools and techniques led by the University of Bern group. Data rescue accounts for only 10 - 15% of the Lot 1 budget, and is focused on three regions in the Southern Hemisphere in and around Argentina, South Africa and in the New Zealand to Drake Passage sector, but will link closely to the larger data rescue efforts of ACRE, IEDRO, ICA&D and similar. As with Lot 2, Lot 1 will deal with the full range of historical terrestrial and marine surface weather observations plus upper air data, serving the various international repositories these data are held in, plus having the capacity to deal with their metadata (including a compendium of all data forms/templates these data are recorded on), scanned images of hard copy data, and weather and analogue (pluviograms, thermograms, barograms etc) charts etc.

Within Lot 2, observations and metadata from land stations and marine platforms will be harmonised into a common data model and a web based service developed to serve the data through the C3S Climate Data Store (CDS). The observations include instantaneous / point observations, such as those from SYNOP weather reports, as well as daily and monthly summaries (CLIMAT DAILY and CLIMAT). A single report may contain observations of multiple parameters, e.g. air temperature, humidity, wind speed etc. The stations range from stationary land stations to mobile merchant ships, drifting buoys and other marine platforms.

Lot 3 are creating a harmonized observational dataset of measurements from the Global Baseline and Reference radiosounding networks. Within the first year observations are restricted to temperature and humidity measurements, in future years this will be expanded to include other essential climate variables (surface temperature, wind, ozone, trace gases, GPS IWV). Observations from the GRUAN and GUAN networks will be the main focus, but with potential extension to the broader RAOB program. Annual updates will be provided. Integrated physical and statistical corrections will be used to improve the quality of the baseline observations using the data from the reference networks. Lot 3 intend to be fully compliant with ODB version 2 (ODB2), noting that some changes will be necessary to ODB2 to report the full range of information required. Discovery metadata are planned to be compliant with ISO 19115 and observational metadata reported using the CF conventions. Compliance with the WIGOS metadata standard is also expected.

Lot 4 will build on and extend the European Climate Assessment and Dataset (ECA&D) project and E-OBS daily dataset for Europe. The gridded E-OBS dataset was initially developed as part of the ENSEMBLES project for statistical comparisons with Regional Climate Model output (Haylock et al., 2008). More recently European

---

[1]From the ITT: A common data model is different from a file format, which defines how information is encoded in a file. The purpose of a data model is to provide a well-defined data structure that can be used to represent data records from a variety of sources, in such a way that the information contained in those records can be unambiguously accessed using a common set of tools. Development of a common data model for observations involves specification of data attributes and their symbolic names, including, for example, identifiers for different instruments, observed parameters, geolocation and timing, etc. A governance structure is required to manage such specifications, ensure consistency with standards where they exist, and to ensure a controlled evolution of the data model.

research projects EURO4M, UERRA, EUPORIAS, EUSTACE, and CLIPc led to further improvements and applications, and ECA&D/E-OBS has now become reference datasets for a larger user community, also outside climate research. Funding by EUMETNET and KNMI supported the developments of additional functionality, and the close collaboration with EUMETNET members has led to strongly improved ECA&D station coverage over Europe in recent years. Within C3S_311a lot 4, the ECA&D and E-OBS will be transformed into an operational system for the Copernicus Climate Change Service (C3S), delivering regularly updated gridded products based on European in-situ data for many Essential Climate Variables (ECVs). The underlying station data that include surface air temperature, precipitation, humidity, wind speed and direction, will be made available as well, pending permission by the owners of these data. To serve climate change monitoring and climate impact assessments a large number of user-oriented climate indices will be provided, both as time series at station sites and as gridded products. No preference has been specified for the data models to be used.

Section 2 of this report provides background information on joint activities between Lots 2 and 3 so far, the ECMWF Observations DataBase (ODB) data model and relevant WMO data models. Section 3 gives an overview of the preferred data model from Lot 2 and proposes a list of elements for the observations table. Auxiliary tables are also proposed in Section 3 but left empty for future discussion once the principles of the type of data model have been agreed across lots. Section 4 proposes a governance mechanism for the common data model across lots and next steps required.

2 Background and existing standards

2.1 ODB and tenders for Lots 2 and 3

Both Lots 2 and 3 have proposed using data models based on the data model developed by ECMWF as part of the Observations DataBase (ODB) software. Within the ODB type data model each observation of a single parameter is stored as a separate record, with a single report spanning multiple records. Within each record the station / report information is repeated. A simplified example is shown in Table 1.

Table 1: Simplified example of records in ODB type data model, with observations from reports 1 and 2 spanning multiple records. For simplicity, the z coordinate has been omitted but profile data would be represented with each layer / height as a separate record

header information					observation information		
record id	report id	obs id	date	location	parameter	value	units
1	1	1	2012-01-01 12:00+0.0	POINT(-40 40)	air temperature	300.0	K
2	1	2	2012-01-01 12:00+0.0	POINT(-40 40)	sea level pressure	1013.0	hPa
3	2	3	2012-01-01 18:00+0.0	POINT(-40.1 40.2)	air temperature	300.3	K
4	2	4	2012-01-01 18:00+0.0	POINT(-40.1 40.2)	sea level pressure	1013.2	hPa

End of table

The implementation of the ODB model at ECMWF, that proposed in Lots 2 and 3 all have differing requirements. For example, the existing observations table columns defined within ODB[2] contain many parameters that are of little relevance to the In Situ observations but are relevant to the assimilation of data from many different sources

---

[2]http://apps.ecmwf.int/odbgov/column/

into the numerical models. Conversely, there are many parameters included in the data from Lots 2 and 3 that are required to correctly interpret the observations but that are not included in ODB.

In order to facilitate the development of the data model there have been two initial teleconferences between Lots 2 and 3 discussing the CDM and collating information on the parameters required . Each parameter and report type has its own unique set of fields and metadata fields. For example, surface air temperature observations are typically made in a screen or shelter that can influence the quality of the measurements. As a result, it is desirable to include information on the screen type, material and dimensions alongside the observation. For upper air temperature observations this metadata information is not relevant but other parameters will be required, such as the type of balloons used, instrument type and burstpoint.

In order to represent the wide variety of metadata required across (and within) Lots three different solutions are possible:

- The observations table is expanded to include all possible metadata fields, with new columns added when a new data / report type is included.

- Each report (and possibly parameter) type has a separate observations table, with a minimum set of common parameters defined across the different tables.

- The observations table is defined to include the minimum set of information required for each observation and the metadata is then linked via a series of Entity-Attribute-Value (EAV) based tables (e.g. see Table 2).

Within this document we are proposing to use solution (3), defining a minimum set of parameters to be included in the observations table and linking to the metadata in auxiliary tables. Solution (1) has been discounted as being impractical from an implementation perspective and from the perspective of adding new data types at a future date. Option (2) has not been discounted but will result in a series of data models being defined rather than a single unified data model.

Table 2: Simplified example for EAV type table for profile (atmospheric and oceanic) data.

report id	report type	field	value coded	value numeric
4	GRUAN	Ascent Balloon Number	1	NA
4	GRUAN	Ascent Balloon Type	1	NA
4	GRUAN	Ascent balloon weight (g)	NA	100.0

End of table

2.2 BUFR and WIGOS Metadata Standard

Prior to defining the data model it is useful to refer to both the WMO Binary Universal Form for the Representation of meteorological data (BUFR) (WMO, 2015a) and the WMO Integrated Observing System Metadata Standard (WMDS) (WMO, 2015b).

The BUFR format is a flexible and efficient table driven format for reporting weather observations on the WMO Global Telecommunications System (GTS) in binary. The tables defined as part of the BUFR format include many of the parameters that will be included in the CDM. For example, Common code table C6 (WMO 2015a) includes all the measurement units reportable in BUFR (and other WMO codes). Similarly, code tables are defined for reporting instrument types and methods, station types etc. Where possible, these code tables should

be referenced and used in preference to defining new code tables.

In recognition of the increasing importance of observational metadata the WMDS is currently under development and undergoing a phased implementation (WMO, 2015b). The WMDS forms an extension of the ISO19115 metadata standard, with additional mandatory elements describing both the station level and discovery metadata as well as specific information on the instrumentation used and processing steps. As part of the process simplified versions of BUFR and other tables have been included in the standard. As with BUFR these tables should be referenced, where appropriate, in preference to defining new code tables. Additionally, for compatibility with WIGOS the CDM should contain all mandatory elements of the WMDS.

3 Common Data Model

As noted above, we are proposing a data model based on the ODB type data model, but with the metadata linked through a series of auxiliary / configuration tables. A schematic of this is shown in Figure 1. The observations table is described fully below (Table 3) and contains the geospatial (xyz) and temporal (t) locations of both the station making the report and the observed parameter, unique identifying information for the station, source data (i.e. dataset) information, observed values and data licencing / usage rights. In Table 3 below, where we list the proposed elements for the observations table, we also identify where there is overlap with the elements required by the WMDS. It should be noted that not all elements from the WMDS will appear in the observations table but will be included in the auxiliary tables.

Simplified CDM schematic here

To enable flexibility and accommodate the diverse data types and metadata the additional tables are proposed to be EAV based (see Table 2 above for example). This also gives the flexibility of adding a new metadata field by simply adding a new row rather than column. Within the following tables the following syntax has been used to indicate the data type for the different elements:

- numeric: Any numeric value (integer or floating point).

- int: An integer value.

- varchar: A variable length character string.

- timestamp: A timestamp, e.g. "2017-07-01 00:00:0.0+00".

- []:   An array of the indicated type.

- (fk)   The indicated value is also a foreign key linking to another table.

3.1 Observations table

Preamble text ...

Table 3: observations table

element_number	element_name	kind	external_table	description
1	report_id	bigint (pk)		Unique ID for report (unique ID given by combination of RecordID and ObservationID)
2	region	int (fk)	region	Region (WMO region / Ocean basin)
3	sub_region	int (fk)	sub_region	Country / regional sea
4	application_area	int[] (fk)	application_area	WMO application area(s)
5	observing_programme	int[] (fk)	observing_programme	Observing programme, e.g. VOS
6	report_type	int (fk)	report_type	e.g. SYNOP, TEMP, CLIMAT, etc
7	station_name	varchar		e.g. GRUAN station name, ship name, site name etc
8	station_type	int (fk)	station_type	Type of station, e.g. land station, sea station etc
9	platform_type	int (fk)	platform_type	Structure upon which sensor is mounted, e.g. ship, drifting buoy, tower etc
10	platform_sub_type	int (fk)	platform_sub_type	Sub-type for platform, e.g. 3m discuss buoy
11	primary_station_id	varchar		Primary station identifier, e.g. WIGOS ID
12	primary_station_id_scheme	int (fk)	id_scheme	Scheme used for unique station ID
13	secondary_station_id	varchar		Alternate (local) ID for station
14	secondary_station_id_scheme	int (fk)	id_scheme	Alternate ID Scheme, e.g. Network ID
15	station_location_longitude	numeric		Longitude of station, -180.0 to 180.0 (or other as defined by station_crs)
16	station_location_latitude	numeric		Latitude of station, -90 to 90 (or other as defined by station_crs)
17	station_location_accuracy	numeric		Accuracy to which station location recorded (radius in km)
18	station_location_method	int(fk)	location_method	Method by which location determined
19	station_location_quality	int (fk)	location_quality	Quality flag for station location
20	station_crs	int (fk)	crs	Coordinate reference scheme for station location
21	station_speed	numeric		Station speed over ground if mobile (m/s)
22	station_course	numeric		Station course over ground if mobile (degree true)
23	station_heading	numeric		Station heading if mobile
24	surface_type	int (fk)	surface_type	e.g. rolling hills
25	surface_type_scheme	int (fk)	surface_type_scheme	Scheme used to classify surface cover
26	site_topography	int (fk)	site_topography	Description of local topography and broader context
27	station_configuration	int (fk)	station_configuration	Link to station metadata / configuration

Table 3 observations_table (cont.)

element_number	element_name	kind	external_table	description
28	height_of_station_above_local_ground	numeric		Height of station above local ground (m)
29	height_of_station_above_sea_level	numeric		Height of station above mean sea level (m), negative values for below sea level.
30	height_of_station_above_sea_level_accuracy	numeric		Accuracy to which height of station known (m)
31	sea_level_datum	int (fk)	sea_level_datum	Datum used for sea level
32	report_meaning_of_time_stamp	int (fk)	meaning_of_time_stamp	Report time - beginning, middle or end of reporting period
33	report_year	int		Year of report (UTC)
34	report_month	int		Month of report (UTC)
35	report_day	int		Day of report (UTC)
36	report_hour	int		Hour of report (UTC)
37	report_minutes	int		Minute of report (UTC)
38	report_seconds	int		Seconds of report (UTC)
39	report_duration	int		Report duration (s), e.g. 86400 = daily obs, 3600 hourly etc
40	report_time_accuracy	numeric		Precision to which time was recorded (s)
41	report_time_quality	int (fk)	time_quality	Quality flag for ReportDateTime
42	report_time_reference	int (fk)	time_reference	Reference Time (e.g. referenced to time server, atomic clock, radio clock etc)
43	profile_configuration	int (fk)	profile_configuration	Information on profile (atmospheric / oceanographic) configuration. Set to Record ID for profile data or missing (NULL) otherwise.
44	events_at_station	int[] (fk)	events_at_station	e.g. ship hove to, crop burning etc.
45	report_quality	int (fk)	quality_flag	Overall quality of report
46	duplicate_status	int (fk)	duplicate_status	E.g. no duplicates, best duplicate, duplicate, not checked.
47	duplicates	int[] (fk)	observations_table	Array of report_id's for duplicates
48	maintenance_and_update_frequency	int (fk)	update_frequency	Frequency with which modifications and deletions are made to the data after it is first produced
49	history	varchar		Sequence of processing steps. Free text with timestamp 1 : history 1; timestamp 2 : history 2 etc.
50	record_year	int		Year of revision of this record (UTC)
51	record_month	int		Month of revision of this record (UTC)

element_number	element_name	kind	external_table	description
52	record_day	int		Day of revision of this record (UTC)
53	record_hour	int		Hour of revision of this record (UTC)
54	record_minute	int		Minute of revision of this record (UTC)
55	record_seconds	int		Seconds of revision of this record (UTC)
56	processing_level	int (fk)	report_processing_level	Level of processing applied to this report
57	processing_code	int[] (fk)	report_processing_code	Processing applied to this report
58	source_id	int (fk)	source_configuration	Original source of data link to table
59	source_record_id	varchar		Record ID in source data, e.g. ID of event from GRUAN meta database
60	data_policy_licence	int (fk)	data_policy_licence	WMOessential, WMOadditional, WMOother
61	observation_id	int (pk)		Together with RecordID forms unique ID for observation / record
62	observed_variable	int (fk)	observed_variable	The variable being observed / measured
63	units	int (fk)	units	Units for the observed variable
64	code_table	int (fk)	observation_code_table	Encode / decode table for variable (if encoded)
65	observation_value	numeric		The observed value
66	observation_value_significance	int (fk)	observation_value_significance	e.g. min, max, mean, sum
67	observation_timestamp_meaning	int (fk)	meaning_of_time_stamp	beginning, middle, end
68	observation_year	int		Year of observation (UTC)
69	observation_month	int		Month of observation (UTC)
70	obvservation_day	int		Day of observation (UTC)
71	observation_hour	int		Hour of observation (UTC)
72	observation_minute	int		Minutes of observation (UTC)
73	observation_seconds	int		Seconds of observation (UTC)
74	observation_duration	int		Duration/period over which observation was made (s)
75	observation_longitude	numeric		Longitude of the observed value, -180 to 180 (or other as defined by CRS)
76	observation_latitude	numeric		Latitude of the observed value, -90 to 90 (or other as defined by CRS)
77	observation_location_method	int (fk)	location_method	Method of determining location,
78	observation_location_precision	numeric		Precision to which location is reported (radius km)

Table 3 observations_table (cont.)

element_number	element_name	kind	external_table	description
79	observation_bounding_box_min_longitude	numeric		Bounding box for observation, valid range given by CRS
80	observation_bounding_box_max_longitude	numeric		Bounding box for observation, valid range given by CRS
81	observation_bounding_box_min_latitude	numeric		Bounding box for observation, valid range given by CRS
82	observation_bounding_box_max_latitude	numeric		Bounding box for observation, valid range given by CRS
83	observation_spatial_representativeness	int (fk)	spatial_representativeness	Spatial representativeness of observation
84	observation_height_above_station_surface	numeric		Height of sensor above local ground or sea surface. Positive values for above surface (e.g. sondes), negative for below (e.g. xbt). For visual observations, height of the visual observing platform.
85	observation_z_coordinate	numeric		z coordinate of observation
86	observation_z_coordinate_type	int (fk)	z_coordinate_type	Type of z coordinate
87	observation_z_coordinate_method	int (fk)	z_coordinate_method	Method of determining z coordinate
88	quality_flag	int (fk)	quality_flag	Quality flag for observation
89	numerical_precision	int		Reporting precision of observation in units given by 'units' variable. Equivalent to BUFR scale factor
90	standard_uncertainty	numeric		Standard uncertainty in reported value
91	method_of_estimating_standard_uncertainty	int (fk)	method_of_estimating_uncertainty	Method of estimating the standard uncertainty
92	uncertainty_due_to_correlated_errors	numeric		Uncertainty due to errors in the observation that are correlated between observations
93	method_of_estimating_uncertainty_due_to_correlated_errors	int (fk)	method_of_estimating_uncertainty	NA
94	uncertainty_due_to_uncorrelated_errors	numeric		Uncertainty due to errors in the observation that are uncorrelated between observations

Table 3 observations_table (cont.)

100	sensor_id	int (fk)	sensor_configuration	NA
101	sensor_automation_status	int (fk)	automation_status	Automated, manual, mixed or visual observation
102	exposure_of_sensor	int (fk)	instrument_exposure_quality	Whether the exposure of the instrument will impact on the quality of the measurement
103	original_precision	int		Original reporting precision in units given by 'original_units'
104	original_units	int (fk)	units	Original units
105	original_value	numeric		Original value as reported or recorded in log book.
106	conversion_factor	int (fk)	conversion_factor	Link to table describing conversion process
107	processing_code	int[] (fk)	processing_code	e.g. TRC (temperature radiation corrections) etc. Encoded in table.
108	processing_level	int (fk)	processing_level	Level of processing applied to observation.
109	adjustment_id	int (fk)	adjustment	Adjustment applied to observation reported in observation value (observation_value = original + adjustment)
110	traceability	int (fk)	traceability	Whether observation can be traced to international standards.

End of table

3.2   Station configuration table

Table 4: station_configuration

element_number	element_name	type	external_table	description
0	station_primary_id	varchar		Primary (WMO) ID for station
1	station_primary_id_scheme	int (fk)	id_scheme	Scheme used for primary ID
2	station_record_number	int	NA	Record number for this station entry
3	station_secondary_id	varchar		Secondary (local) ID for station
4	station_secondary_id_scheme	int (fk)	id_scheme	Scheme used for secondary ID
5	station_name	varchar		Name of station (e.g. Tateno)
6	station_abbreviation	varchar		Abbreviation of station name (e.g. TAT)
7	start_date	timestamp		Date that the station first started reporting in this configuration
8	end_date	timestamp		Last data the station reported in this configuration
9	station_type	int (fk)	station_type	Type of reporting station
10	platform_type	int (fk)	platform_type	Generic type of observing platform
11	platform_sub_type	int (fk)	platform_sub_type	Specific type of observing platform
12	operating_institute	int (fk)	institute	Institute operating the station
13	operating_territory	int (fk)	sub_region	Sub-region where station is located or country of registry for mobile station
14	observing_frequency		observing_frequency	Typical frequency of observations for this station
15	telecommunication_method	int (fk)	communication_method	Method used to report observations
16	station_automation	int (fk)	automation_status	Whether station is automated, manual or mixed
17	measuring_system_model	int (fk)	measuring_system_model	Station / AWS model type
18	measuring_system_id	varchar		ID or serial number of measuring system
19	field_numeric	int[] (fk)	station_configuration_fields	Field to which following values correspond
20	value_numeric	numeric[]		Values for specified fields

Table 12: communication_method

value	description
0	Cellular (unspecified)
1	Meteosat DCP
2	Iridium (unspecified)
3	GOES DCP
4	VSAT (unspecified)
5	Landline telephone
6	Radio modem
7	E-mail (unspecified)
8	Voice (ship). The observation is sent to a NMS through the telephone network. The communication may use Inmarsat, Iridium, Vsat, VHF
9	Email (ship). The observation is sent to a NMS through an email. The WMO message is attached to this email. The satellite communication provider may be Inmarsat, Iridium, Vsat
10	Web (ship). The observation is sent through the Web (example: TurboWeb). The satellite communication provider may be Inmarsat, Iridium, Vsat
11	Inmarsat-C (FM13, SAC41). Standard procedure used to report observations (FM13 messages) from conventional VOS for many years. Collect call system: the NMS which receives the observations pays the communication costs
12	Inmarsat-C (FM13, other SAC). FM13 messages are sent to a dedicated SAC (other than SAC41) established at one, or more LES. In general, communications are paid by the country who recruited the ship
13	Inmarsat-C (EUHC). Text messages containing compressed data (E-SURFMAR format) are sent ashore through Inmarsat-C to a dedicated SAC and LES. Communications are paid by the country who recruited the ship
14	Inmarsat-C (SEAS). SEAS binary messages sent through Inmarsat-C Data Mode to a dedicated SAC and LES. Communications are paid by NOAA/NWS
15	Automated Identification System (direct or through satellite)
16	Argos system

Table 24: observed_variable

value	parameter_group	domain	sub_domain	abbreviation	name	units	description
0	cloud	atmospheric	upper-air	ch	high_cloud_type	coded	type of high clouds (ch)
1	cloud	atmospheric	upper-air	cm	middle_cloud_type	coded	type of middle clouds (cm)
2	cloud	atmospheric	upper-air	cl	low_cloud_type	coded	type of low clouds (cl)
3	cloud	atmospheric	upper-air	nh	cloud_base_height	m	cloud base height (nh)
4	cloud	atmospheric	upper-air	nl	low_cloud_amount	Okta	low cloud amount (n)
5	cloud	atmospheric	upper-air	tcc	total_cloud_amount	Okta	total amount of clouds
6	cloud	atmospheric	upper-air	n	cloud_cover	Okta	Total cloud cover
7	humidity	atmospheric	surface; upper-air	rh	relative_humidity	1	NA
8	humidity	atmospheric	surface; upper-air	q	specific_humidity	1	specific means per unit mass. Specific humidity is the mass fraction of water vapor in (moist) air.
9	humidity	atmospheric	surface; upper-air	dep_dew	dew_point_depression	K	Dew point depression is also called dew point deficit. It is the amount by which the air temperature exceeds its dew point temperature. Dew point temperature is the temperature at which a parcel of air reaches saturation upon being cooled at constant pressure and specific humidity.
10	humidity	atmospheric	surface; upper-air	t_dew	dew_point_temperature	K	Dew point temperature is the temperature at which a parcel of air reaches saturation upon being cooled at constant pressure and specific humidity.
11	humidity	atmospheric	surface; upper-air	t_wet	wet_bulb_temperature	K	NA
12	humidity	atmospheric	surface; upper-air	t_ice_bulb	ice_bulb_temperature	K	NA
13	pressure	atmospheric	surface	a	pressure_tendency_characteristics	coded	characteristic of pressure tendency (used in synoptic maps)

Table 24 observed_variable (cont.)

value	parameter_group	domain	sub_domain	abbreviation	name	units	description
14	pressure	atmospheric	surface	p	air_pressure	Pa	NA
15	pressure	atmospheric	surface	mslp	air_pressure_at_sea_level	Pa	sea_level means mean sea level, which is close to the geoid in sea areas. Air pressure at sea level is the quantity often abbreviated as MSLP or PMSL.
16	pressure	atmospheric	surface	ppp	pressure_tendancy	Pa	pressure tendency
18	salinity	oceanic	surface; sub-surface	sal	salinity	psu	ocean salinity (PSU)
19	temperature	atmospheric	surface; upper-air	t_air	air_temperature	K	Air temperature is the bulk temperature of the air, not the surface (skin) temperature.
20	temperature	oceanic	surface; sub-surface	t_water	water_temperature	K	Water (sea, river, lake) temperature at depth indicated
21	visibility	atmospheric	surface	vv	horizontal_visibility_in_air	m	The visibility is the distance at which something can be seen.
22	weather	atmospheric	surface	w1	past_weather_1	coded	past weather (w)
23	weather	atmospheric	surface	ww	present_weather	coded	present weather (ww)
24	weather	atmospheric	surface	w2	past_weather_2	coded	past weather 2 (used in synoptic maps)
26	wind	atmospheric	surface; upper-air	d	wind_from_direction	degree	direction from which the wind is blowing
27	wind	atmospheric	surface; upper-air	u	eastward_wind_speed	m s-1	Eastward indicates a vector component which is positive when directed eastward (negative westward). Wind is defined as a two-dimensional (horizontal) air velocity vector, with no vertical component. (Vertical motion in the atmosphere has the standard name upward_air_velocity.)
28	wind	atmospheric	surface; upper-air	v	northward_wind_speed	m s-1	Northward indicates a vector component which is positive when directed northward (negative southward). Wind is defined as a two-dimensional (horizontal) air velocity vector, with no vertical component. (Vertical motion in the atmosphere has the standard name upward_air_velocity.)

Table 24 observed_variable (cont.)

value	parameter_group	domain	sub_domain	abbreviation	name	units	description
29	wind	atmospheric	surface; upper-air	w	wind_speed	m s-1	Speed is the magnitude of velocity. Wind is defined as a two-dimensional (horizontal) air velocity vector, with no vertical component. (Vertical motion in the atmosphere has the standard name upward_air_velocity.) The wind speed is the magnitude of the wind velocity.
30	wind	atmospheric	surface	w_gust	wind_speed_of_gust	m s-1	Speed is the magnitude of velocity. Wind is defined as a two-dimensional (horizontal) air velocity vector, with no vertical component. (Vertical motion in the atmosphere has the standard name upward_air_velocity.) The wind speed is the magnitude of the wind velocity. A gust is a sudden brief period of high wind speed. In an observed timeseries of wind speed, the gust wind speed can be indicated by a cell_methods of maximum for the time-interval. In an atmospheric model which has a parametrised calculation of gustiness, the gust wind speed may be separately diagnosed from the wind speed.

74	Drifting buoy		SVPG Standard Lagrangian drifter with GPS
75	Drifting buoy		SVP-HR drifter with high-resolution temperature or thermistor string
76	Subsurface float		Unspecified subsurface float
77	Profiling float		SOFAR
78	Profiling float		ALACE
79	Profiling float		MARVOR
80	Profiling float		RAFOS
81	Profiling float		PROVOR

Table 29 platform_sub_type (cont.)

value	platform_type	abbreviation	description
82	Profiling float		SOLO
83	Profiling float		APEX
84	Moored buoy		Unspecified moored buoy
85	Moored buoy		Nomad
86	Moored buoy		3-metre discus
87	Moored buoy		10-12-metre discus
88	Moored buoy		ODAS 30 series
89	Moored buoy		ATLAS (e.g. TAO area)
90	Moored buoy		TRITON buoy
91	Moored buoy		FLEX mooring (e.g. TIP area)
92	Moored buoy		Omnidirectional waverider
93	Moored buoy		Directional waverider
94	Profiling float		Subsurface ARGO float
95	Profiling float		PALACE
96	Profiling float		NEMO
97	Profiling float		NINJA
98	Ice buoy		Ice buoy/float (POPS or ITP)
99	Moored buoy		Mooring oceanographic
100	Moored buoy		Mooring meteorological
101	Moored buoy		Mooring multidisciplinary (OceanSITES)
102	Moored buoy		Mooring tide gauge or tsunami buoy
103	Ice buoy		Ice beacon
104	Ice buoy		Ice mass balance buoy

Table 44: spatial_representativeness

value	description
0	Nil reason - None of the codes in the table is applicable in the context of the observed quantity or unknown, or not available information.
1	Microscale - An area or volume less than 100 m horizontal extent (for example, evaporation)
2	Toposcale, local scale - An area or volume of 100 m to 3 km horizontal extent (for example, air pollution, tornadoes)
3	Mesoscale - An area or volume of 3 km to 100 km horizontal extent (for example, thunderstorms, sea and mountain breezes)
4	Large scale- An area or volume of 100 km to 3000 km horizontal extent (for example, fronts, various cyclones, cloud clusters)
5	Planetary scale - An area or volume of more than 3000 km horizontal extent (for example, long upper tropospheric waves)
6	Drainage area - An area (also known as catchment) having a common outlet for its surface runoff, in km2
